

# HYDRAULIC STABILIZATION CONTROL BOXES & VALVES

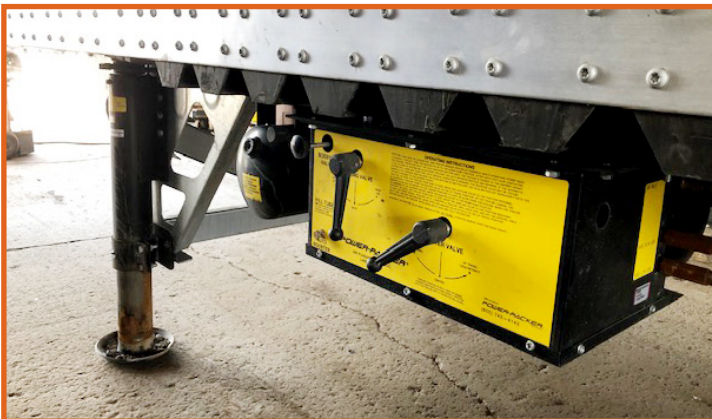

## Control Boxes

Maintain complete operation over your hydraulic systems, even in the most severe temperatures, with control boxes that feature a self-contained power source. Available in a variety of configurations Power-Packer's control boxes are designed to meet your unique application needs and features include:

- Electric or gas powered hydraulic controls
- Patented flow restricter controls retraction

- Oil reservoir with a level gauge
- 1 to 6 Valves
- 6.5- or 11-gallon reservoir options

## Valves

Our valve assemblies utilize a motor spool configuration, ensuring that the load is held by the valves in the leg, and not at the control valve. An added benefit of our valve set-up is that the hoses are only pressurized when the leg is in motion. Power-Packer valve assemblies also include other features and benefits such as:

- Integral flow controls to provide chatter- free descent control
- Smooth and reliable transmission
- Precisely adjustment of torque output
- Convenient flow control valve
